

PRD: AI Chess Co-pilot Demo

1. Overview

An interactive web application that acts as an intelligent companion for chess players, providing real-time analysis, move suggestions, and educational feedback during gameplay.

2. Problem

- Traditional engines provide raw evaluations but lack human-readable explanations.
- Beginners struggle to understand why a move is considered a mistake.

3. Goal

Create a high-signal coaching experience that helps users improve their tactical vision through natural language feedback.

4. Target User

- Casual players looking to understand engine theory.
- Students of the game who prefer a newsletter-style summary of their performance.

5. Core Features (MVP)

5.1 Real-time Analysis

- Live engine evaluation bars.
- Natural language explanations for best moves generated by AI.

5.2 Post-Game Summary

- Timeline of key moments in reverse chronological order.
- AI-generated digest of tactical themes identified during the game.

6. Technical Requirements

- Chess Engine: Stockfish via Web Workers.
- LLM Integration: GPT-4o for move commentary and summaries.

7. UI/UX

The design follows a minimalist approach with a monochromatic palette to avoid visual clutter, ensuring the user focuses entirely on the board and the AI's guidance.
